RAYNETONE

// Digital Sovereignty

Together, we'll help German SMBs become digitally sovereign

Digital Sovereignty begins with transparency

Geopolitical uncertainties, rising cyber risks, new regulatory requirements, and the growing dependence on non-European technologies present companies with a key question:

Is your digital business sufficiently sovereign?

Many companies are unaware of all the technologies they use or the actual interdependencies within their IT landscape. A lack of transparency makes it difficult to make informed decisions, increases security risks, and hinders the path toward a self-sufficient, future-proof IT infrastructure.
Today, companies face several challenges at once:

Lack of IT Visibility

Potential vendor lock-in

Increased Cyber Risks

Unclear options for action

The european path to Digital Sovereignty

Raynet, Deloitte, and STACKIT combine consulting, technology, and infrastructure into a holistic approach to digital sovereignty.

•rayNET

True IT Asset Visibility with Raynet One – complete transparency into Technologies, Assets, Dependencies, Risks, and Areas for Action.

Deloitte.

Strategic consulting, maturity analysis, roadmap development, and transformation support, taking into account European regulations.

STACKIT
A Brand of Schwarz Digits

European cloud infrastructure for secure and sovereign operations in accordance with European legal and data protection standards.

Our offer

Digital Sovereignty Risk Assessment

Making Digital Sovereignty measurable through IT data

With the Digital Sovereignty Risk Assessment, you'll receive a thorough evaluation of your current level of maturity.

The assessment provides answers to key questions:

- How transparent is our IT landscape?
- Is our business-critical IT sufficiently secured?
- What risks arise for security, compliance, and operations?
- Are there assets from sanctioned companies in our IT infrastructure?
- Which measures create the greatest value?

Your results

- **Sovereignty index**
  An objective maturity score based on the European Commission's Strategy for Digital Sovereignty
- **KPI-based risk identification**
  Assessment of risk exposure, vendor dependencies, and opportunities for optimization.
- **Recommendations for action**
  Prioritized actions for the next steps.
- **Custom roadmap**
  A concrete roadmap for achieving your sovereignty goals.

Your journey to Digital Sovereignty

Evaluate
Evaluation of the current status using the Digital Sovereignty Risk Assessment.

Understand
Achieve complete transparency regarding technologies, assets, and risks with **Raynet One**.

Implementation
Development and implementation of a customized sovereignty strategy by **Deloitte**.

Control
