RAYNETONE

Start with **True IT Asset Visibility.**
Make your IT initiatives a success.

For **Cybersecurity** & **IT Management** Teams
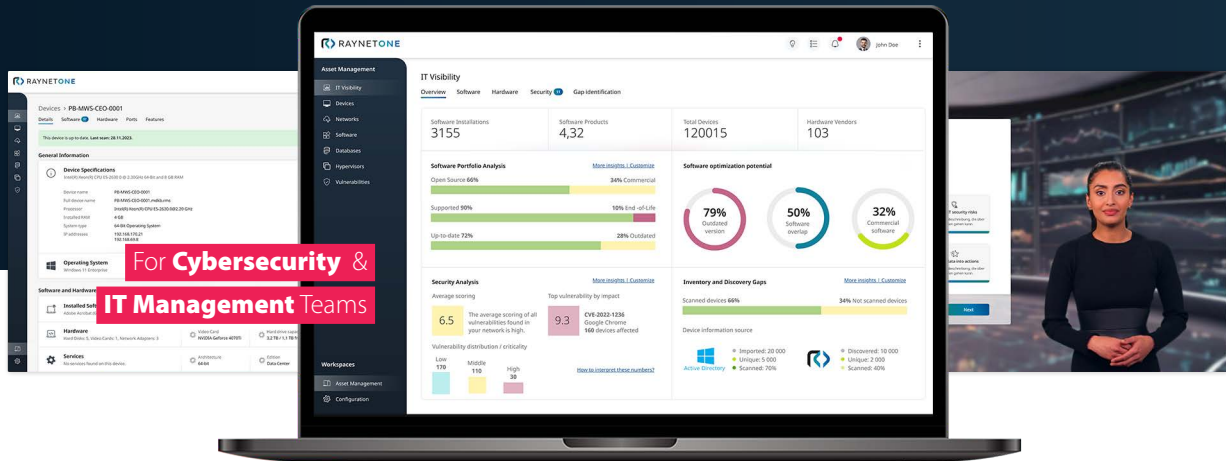

Raynet One gives you a **single**, **reliable source of truth** for all IT assets, enabling you to **protect**, **streamline**, and **manage** complex IT systems.

Raynet One provides cybersecurity and IT teams with True IT Asset Visibility by combining flexible inventory methods with numerous SaaS & cloud connectors.

Aggregating, transforming, normalizing and enriching the collected raw data creates a high-quality, complete and reliable basis. This is the starting point for the success of company-wide IT initiatives.

// Cybersecurity
You can´t **protect** what you can´t see

Whether Vulnerability or End of Life & End of Support Management, whether Cyber Asset Attack Surface or Security Patch Management: We provide the basis for any cyber-security initiative with True IT Asset Visibility and enable organizations to increase their IT security across all of their endpoints immediately and permanently.

// IT Management
You can´t **manage** what you can´t see

A Single Source of Truth for all of your IT asset data is essential for successful IT projects and serve as the foundation for further initiatives like SAM, HAM, ITAM, or ITSM.

We support these initiatives and help you to optimize costs and automate processes to enable effective IT Management.

Your **benefits** with **True IT Asset Visibility**

Gain True IT Asset Visibility across your entire infrastructure

Close security gaps and reduce the attack surface of your IT assets

Eliminate data silos and create synergies for all your teams

Optimize your portfolio and save valuable IT costs and resources
