

// Automated Third-Party Patch Management

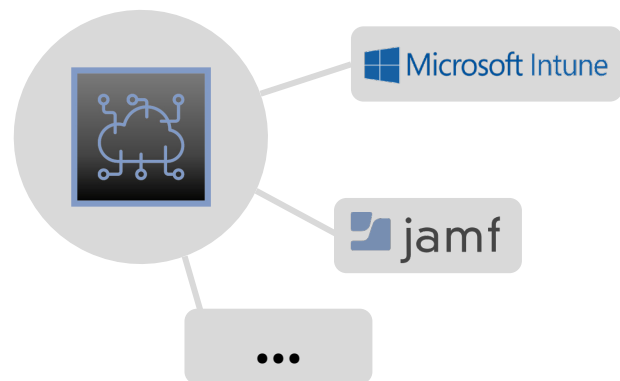

## Gain more security & control across your entire IT landscape

The growing diversity and complexity of IT infrastructures, coupled with ever shorter update intervals, confront IT administrators with the almost insurmountable task of keeping the entire software and hardware portfolio up to date while ensuring secure business operations.

Companies that use solutions such as **Jamf** and/or **Microsoft Intune** to manage their IT infrastructure, for example, lack the automatic function to fully cover Third-Party and Security Patch Management.

To maintain control over multiple endpoints and ensure maximum IT security, organizations need a solution that complements and augments existing technologies without sacrificing efficiency.

## The perfect complement to Jamf and Microsoft Intune

**RayManageSoft Unified Endpoint Manager (UEM)** fills these gaps and supplements existing solutions. As a result, organizations benefit from a fully automated end-to-end process and significantly improved IT security without having to abandon proven solutions.

One of the biggest advantages of RayManageSoft UEM compared to Jamf or Microsoft Intune is the advanced Update Management including automated package provisioning and deployment.

While other solutions focus only on software provisioning, RayManageSoft UEM goes a step further and continuously monitors the applications deployed by the other solutions for updates.

The direct **Package Store integration** ensures that new versions or patches are provided quickly and deployed automatically. In addition, RayManageSoft UEM delegates responsibility to the relevant agent to determine which packages need to be installed and which do not.

This makes updating and managing endpoints more secure, efficient and easy than ever before.

### Your benefits

- Add key functionality to existing solutions such as Intune and JAMF
- Increase the security of your IT infrastructure through intelligent Security Patch Management
- Automate and schedule your patch processes to prevent manual intervention
- Inventory, manage & control all your Windows & macOS devices
- Benefit from comprehensive and centralized reporting for complete transparency
- Identify and close security gaps and vulnerabilities on your endpoints

RAYMANAGESOFT UNIFIED ENDPOINT MANAGER
